

Monori App Review Guide

This guide is provided for App Review to explain how to test Monori's main features.

Monori is a local-first reading app. It allows users to browse content through supported websites and explicitly import accessible content into a local Library for reading.

Monori does not operate a Monori backend, content proxy, shared cloud content service, analytics service, advertising service, or cross-user content service. Optional backup uses the user's own private iCloud/CloudKit storage.

Important Review Account Information

Monori does not provide account creation and does not maintain Monori user accounts.

Patreon and Google Docs are third-party websites displayed inside Monori's `WKWebView`. Any login, sign-up, profile, account-management, or account-deletion UI displayed by those websites belongs to the respective third-party service.

For App Review, **please use the Google review account and credentials provided in App Store Connect's App Review Information** for both Patreon and Google Docs. It is not necessary to create a new Patreon or Google account.

For Patreon, choose **Log in / Continue with Google** and use the provided Google review account. Please do not use Patreon's **Sign up** flow for testing Monori. A Patreon account created on the Patreon website is a Patreon account and is not created, stored, or managed by Monori.

If Google blocks the login because of the review location or requests additional verification, please contact us through App Store Connect messages. We can approve the login attempt or provide the required verification code promptly.

1. App Navigation

Monori has three main tabs:

Tab	Purpose
Browser	Browse supported websites and import content
Library	Read imported works and manage reading progress
Settings	Configure app and reading preferences

Browser

The source selector at the top of the Browser tab provides five supported sources:

- 1. Patreon
- 2. Vocus
- 3. Archive of Our Own (AO3)
- 4. Google Docs
- 5. AsianFanfics (AFF)

Each source uses its own website session managed by `WKWebView` .

2. Demo Content

The following works were created or uploaded by the developer specifically for App Review testing. They provide predictable content without requiring reviewers to search for arbitrary third-party works.

Source	Login	Demo account / search	Demo content
Vocus	No	Search hikaruHa	「我在便利商店等一場雪」

Source	Login	Demo account / search	Demo content
Patreon	Yes	Search hikaruHa	「霧港三號倉庫」
AO3	No	Search shane_y747	「紙上幽靈」
Google Docs	Yes	Shared with me	「鏽鐵之夏」
AsianFanfics	No	Search monoriappdemo	「第十七次登出：一個沒有伺服器的世界」

Google Docs requires the Google review account whose credentials are provided in App Store Connect's App Review Information.

Patreon uses the same provided Google review account. On Patreon's website, choose **Log in / Continue with Google** rather than creating a new Patreon account.

3. Importing Content

The Import button appears only on supported page types.

For App Review testing, please use the demo content listed below.

3.1 Vocus

Login required: No

Steps

1. Open Browser.
2. Select Vocus from the source selector.
3. Search for hikaruHa .
4. Open the room 「我在便利商店等一場雪」 .
5. The Import / 匯入 button appears on the supported room page.
6. Tap Import / 匯入.

The imported work will appear in the Library tab.

3.2 Patreon

Login required: Yes

Steps

1. Open Browser.
2. Select Patreon.
3. Choose **Log in / Continue with Google**.
4. Sign in using the Google review account provided in App Store Connect.
5. Search for hikaruHa .
6. Open the Collection 「霧港三號倉庫」 .
7. The Import / 匯入 control is available on the Collection page.
8. Tap Import / 匯入.

The Patreon demo content belongs to the developer's account. The Collection page is the intended testing page for the Patreon importer.

Please do not create a new Patreon account for review. Patreon's sign-up, profile, Settings, creator, logout, and account-management screens are third-party Patreon webpages and are not Monori account functionality.

3.3 Archive of Our Own (AO3)

Login required: No

Steps

1. Open Browser.
2. Select AO3.
3. Search for shane_y747 .
4. Open the work 「紙上幽靈」 .
5. The Import / 匯入 control appears on the work page.
6. Tap Import / 匯入.

No account is required for this demo work.

3.4 Google Docs

Login required: Yes

Steps

1. Open Browser.
2. Select Google Docs.
3. Sign in using the Google review account provided in App Store Connect.
4. Open Shared with me / 與我共享.

5. Open the document 「鏽鐵之夏」.
6. The Import / 匯入 control appears in the supported document view.
7. Tap Import / 匯入.

The document was created by the developer specifically for App Review testing.

Google Docs is treated as a static document. Automatic chapter-update detection is not available for this source.

3.5 AsianFanfics (AFF)

Login required: No

Steps

1. Open Browser.
2. Select AFF.
3. Search for monoriappdemo .
4. Open the story 「第十七次登出：一個沒有伺服器的世界」.
5. The Import / 匯入 control appears on the supported story page.
6. Tap Import / 匯入.

No account is required for this demo story.

4. Library

4.1 Import confirmation

After a successful import, Monori displays a confirmation message showing the number of imported chapters.

When the same work is imported again, existing chapters are merged with the collection instead of creating duplicate chapters.

After importing a work, open the Library tab.

Imported works appear as collections in the user's local reading library. Tap a collection to view its chapters.

The Library provides:

- Collection management
- Chapter navigation
- Reading progress
- Reading status (追更中 / 完食 / 棄坑)
- Reading history (閱歷)
- Bookmarks
- Search and sorting
- Update checking for supported sources

Status scope

The Library header displays a status dropdown next to the title: 追更中 (Reading), 完食 (Finished), and 棄坑 (Dropped). The default view shows works with the Reading status. Users can change a work's status from the chapter list menu. Marking a work as Finished clears its unread badges but preserves bookmarks, reading progress, and history.

Reading history

Tap the clock icon in the Library header to view reading history. Each entry records when a chapter was opened, grouped by date. Tapping an entry reopens the chapter. Entries for deleted works remain visible but cannot be reopened. Users can clear all history without affecting the library.

5. Reader

Open any imported chapter to enter the Reader.

The Reader provides:

- Previous / Next chapter navigation
- Bookmarks
- Font size adjustment
- Line spacing adjustment
- Custom reading font import (.ttf / .otf from Files)

These features are provided by Monori across the supported sources.

Previous / Next chapter

The bottom toolbar provides Previous Chapter and Next Chapter navigation.

Bookmarks

Tap the bookmark control in the Reader to bookmark the current chapter.

Bookmarks are stored locally on the device and may be included as metadata in a manual iCloud backup.

Font size and line spacing

Open the reading preferences panel using the T control in the Reader.

The following settings are available:

- Font size
- Line spacing

Custom reading font

Navigate to Settings > Appearance > Reading Font.

From this screen:

1. Tap Import Font to select a `.ttf` or `.otf` file from the Files app.
2. The imported font is validated and stored locally in the app sandbox.
3. Select an imported font to use it as the Reader body font.
4. The Reader updates immediately without reloading the chapter.
5. Swipe left on an imported font to delete it.

Font files are stored only on the device. They are not uploaded or included in iCloud backups. Clearing library data does not remove imported fonts.

The default font is Source Serif 4 with Noto Serif TC fallback for Traditional Chinese.

6. Chapter Update Checking

Collections can be marked as being followed.

For supported sources, Monori can check whether new chapters have appeared.

Patreon

Patreon currently supports automatic foreground checking for followed collections. When a new chapter is detected, the collection and chapter list can show update or unread indicators.

Automatic detection requires an actual new chapter to be published on the source website. The App Review demo content is intentionally stable, so App Review may not see a new-chapter notification during a normal review session.

Vocus, AO3, and AsianFanfics

These sources currently use manual **Check for Updates / 檢查新章節** rather than automatic periodic checking.

Google Docs

Google Docs is treated as a static document and does not support chapter-update detection.

7. Authentication and Third-Party Accounts

Monori does not have its own user account system and does not provide Monori account creation.

For sources that require authentication, users sign in directly to the corresponding third-party website inside the Browser. `WKWebView` manages the website data and authentication session.

The following demo sources do not require login:

- Vocus
- AO3
- AsianFanfics

The following demo sources require login:

- Patreon
- Google Docs

Both Patreon and Google Docs should be tested using the Google review account provided in App Store Connect's App Review Information.

Any sign-up or account-management UI displayed inside Patreon or Google belongs to that third-party website. Monori does not create, store, manage, or delete those third-party accounts and has no technical or administrative control over their account-deletion systems.

Monori does not enumerate, copy, or export authentication cookies, sessions, tokens, or account credentials for use by a Monori service.

8. Local Data, Network Architecture, and iCloud Backup

Network architecture

Monori does not operate a backend or content proxy.

Website content is accessed directly through each website's own infrastructure using `WKWebView`. Some importers use the existing authenticated `WebView` session to request content for the local Reader. These requests go directly to the relevant platform or resources referenced by its pages and do not pass through a Monori server.

Monori does not attempt to bypass website authentication, membership, or access controls.

Local data

Depending on the source and import method, the local `SwiftData` library may store:

- Collection and chapter titles
- Source and chapter URLs

- Author information and visible date strings
- Reading progress and reading status
- Bookmarks
- Reading preferences
- Reading history
- Imported chapter or document HTML where local content is required by the source

Patreon posts are read through the WebView and Monori does not provide offline copies of Patreon posts.

Manual iCloud backup

Monori provides manual iCloud backup and restore using the user's own iCloud account through CloudKit's private database.

A backup may include:

- Collection and chapter metadata
- Bookmarks and reading progress
- Reading history

A backup does **not** include:

- Imported article or document HTML
- Authentication cookies, sessions, or tokens
- User account credentials
- Reading preferences
- Imported font files

The backup is a full snapshot, not continuous synchronization. Monori does not provide automatic or real-time cross-device sync.

CloudKit communicates directly with the user's own iCloud account. Backup data is not sent to a Monori server.

Data deletion

Using **Clear Library Data / 清除書庫資料** deletes local library metadata, reading history, and imported content stored by the app.

Logging out can clear the corresponding WebView website data and end that website session.

An existing iCloud backup is not automatically deleted when local Library data is cleared. Deleting the app removes local app data according to iOS data-management behavior; an existing iCloud backup remains in the user's iCloud account.

Monori does not provide:

- A Monori account system
- Cross-user content sharing or aggregation
- A Monori-hosted cloud content library
- A content proxy
- A content export service
- Third-party AI processing of imported content
- Advertising or analytics services

Additional technical details are documented in `COMPLIANCE.md` .

9. Testing Limitations

Source websites may change

The supported websites control their own page layouts and authentication flows.

A website layout or authentication change can temporarily affect the Import button or Reader presentation.

Chapter update detection

Update testing requires a new chapter to exist on the source website.

The demo content is intentionally stable, so this feature may not produce an update indicator during App Review.

Patreon supports automatic foreground checking for followed collections. Vocus, AO3, and AsianFanfics currently use manual update checking. Google Docs does not support chapter-update detection.

Login

Only Patreon and Google Docs require the App Review credentials supplied in App Store Connect.

The other three demo sources can be tested without an account.

10. Troubleshooting

The Import button is not visible

Please make sure the exact demo page listed in this guide is open.

The Import control is context-sensitive and appears only when Monori recognizes a supported page type.

The page is still loading

Please wait for the website to finish loading before looking for the Import control.

Patreon or Google login is blocked

Please use the Google review account provided in App Store Connect's App Review Information.

For Patreon, choose **Log in / Continue with Google**. It is not necessary to create a new Patreon account.

If Google blocks the login because of the review location or requests additional verification, please contact us through App Store Connect messages. We can approve the login attempt or provide the required verification code promptly.

No new chapter notification appears

This is expected if no new chapter has been published since the last check.

The demo content is intentionally stable. Monori does not simulate new-chapter events for App Review.

11. Feature Coverage

Feature	Patreon	Vocus	AO3	Google Docs	AFF
Browse in Browser	✓	✓	✓	✓	✓
